

Cleaning and Maintenance Guide for Strong Objekt Needlefelt- Floors

StrongObjekt

GENERAL INFORMATION

Strong Object Needlefelt Floors provide a clean solution thanks to their dirt-repellent properties combined with the right choice of color and design. Do not wait until absolutely necessary to clean the floor; instead, clean it as often as possible.

DAILY CLEANING AND MAINTENANCE

Regular brush vacuuming, preferably with a powerful upright vacuum cleaner, helps maintain the good appearance of your carpet. Additionally, loose, dry soil is regularly removed from the lower layer of the flooring.

INTERIM CLEANING

Clean your Strong Objekt Needlefelt floor at regular intervals (depending on foot traffic) using CC300 Crystal Cleaner Encapsulation. This service should be performed at least once a year. In high-traffic areas (entrance zones, walkways in front of cash registers, vending machines, etc.), the interval should be kept as short as possible.

With regular maintenance, the lifespan of a floor can be extended up to four times.

DEEP CLEANING

- Before cleaning, vacuum floor with an upright vacuum cleaner to remove loose dust and dirt.
- Treat high-traffic areas and stains with a pre-spray (recommended: Crystal Family product from Carpet Cleaner Industries).
- If necessary, spot-treat using Crystal Oxy or F1 stain remover. This will help loosen stubborn dirt from the fibers. Make sure to use solutions with minimal surfactant content.

- Sprinkle dry cleaning compound over the soiled areas and brush it in all directions using the Carpet Cleaner CRB machine.
- Finally, remove the dirt-laden compound either by vacuuming it up with a upright vacuum cleaner or by using the Carpet Cleaner CRB machine with the Renovator attachment.

STAIN REMOVAL

Treat stains immediately whenever possible.

- Blot liquids with a clean cloth or paper towel, avoiding rubbing.
- Remove any remaining stain with a cloth or sponge and clear water, always working from the outside toward the center.
- If discoloration persists, use a commercial stain remover, ensuring to test for colorfastness on a small area first.
- In many cases, a mild detergent can help. However, detergent residues must be thoroughly removed with water or a cleaning extractor.
